New Champion Late Flat Dutch Cabbage

We know this to be the finest strain of Late Flat Dutch Cabbage Seed ever offered, and we have gone to much trouble and expense to bring it to the present high standard. It is all head, always sure to head, and will produce a greater weight of cabbage from a given space than any other sort. The heads have scarcely any outer leaves, are remarkably uniform, solid, of fine texture, have a short stem, and usually weigh from ten to thirteen pounds. It is very sweet flavored, keeps well, is an excellent shipper withstands drought well, and is without doubt the finest late cabbage for the Market Gardener and consumer that we ever saw during our thirty years experience. No variety can approach it for fine quality and uniform reliability to produce solid, firm heads of good size during the most unfavorable weather.

From all parts of the country we have received expressions of unanimous praise, and we could fill many pages with testimonials from thousands of Market Gardeners who grew it the past two seasons. If you haven’t had it, don’t fail to get it.

Pkt. 10c., oz. 35c., 1/2 lb. $1.00, 1 lb. $3.75
2 lbs. $7.00.

### RADISH

**New Red Strasbourg Radish**

Felton's Model White Box. (Grown by Felton.) This is the best early white variety for growing under glass, on early borders or on squares. It is likewise a great favorite with many Philadelphia market gardeners for sowing throughout the summer or early autumn months. It is much superior and entirely distinct from any other white turnip variety. Its points of superiority are remarkably short top and rapid growth. Perfect globe turnip shape, extra fine quality, and showing no disposition whatever to become pitchy with age, remaining solid and juicy long after fully grown. Owing to its very short new leaves it can be grown very closely in the row without causing the leaves to "draw." Pk. 5c., oz. 10c., lb. 25c., bbl. 50c.

New Fireball. For forcing in the greenhouse, hotbeds or cold frames, and for sowing on open borders early in the spring there is no other red variety more desirable. It is one of the earliest; in flavor it is mild, crisp, juicy and tender. It forms a small top and will stand a great amount of heat without becoming pitchy. It always commands a much higher price and will sell "three to one" compared with any ordinary red sort. Pk. 5c., oz. 10c., lb. 25c., bbl. 50c.
RADISH (Continued)

New Scarlet Olive. This is unquestionably the best red forcing variety for growing under glass; also very desirable for outdoor planting. It is of a brilliant scarlet color with very short and small leaves, tender, crisp, and in quality all that could be desired. Will mature in forty days, and can be very thickly in the row, unlike other sorts it sells well throughout the year. TOMATO

Mississippi Model. This excellent new variety comes from Silver Springs, Miss., the most famous tomato-growing section of the United States, and is the result of a cross between the well-known Livingston’s Beauty and the Early Bermuda. It is valuable on account of its extreme earliness, perfect freedom from cracking and ability to stand long-distance shipping without injury. For solidity, form, beauty, and absence of rot among the early fruits it is without a peer. Careful comparison proves it to be the most productive sort known, the fruit is large, smooth, and exceedingly firm, and is marketed, and is always sells at a higher price than other sort. It is pre-eminent the best market and shipping sort we know of, pkt. 10c., oz. 35c., 1/4 lb. $1.00, 1 lb. $3.00.

New Mammoth Early White Bush Squash

Extra Early Peerless. This new tomato has fully sustained its claim for extra earliness, and we consider it the earliest really good tomato for cultivation. The tomatoes are of large size, bright red, very solid, and with no green core. The vines are most profusely loaded with fruit and continue to bear throughout the season, and when first fruiting remove more abundantly than any other sort, a great advantage to market gardens. Quality very superior for table use and canning. Exceedingly productive, ripens in the same season. Take it altogether, as near perfection as a tomato can be, Pkt. 25c., 6 pkts. for $1.00.
SEED SWEET POTATOES

We make a specialty of seed sweet potatoes, growing our stock exclusively in New Jersey and Virginia, about seven miles from our Philadelphia warehouse, where we have the best facilities for grading and storing. We ship them in boxes and barrels, with the greatest care; but as they are very susceptible to climatic changes, we cannot hold ourselves responsible for their condition on arrival after long journeys of several hundred miles.

New Extra Early Accomac. This remarkably new variety originated with Mr. Charles S. Worth, of Accomac County, which is located on the Eastern Shore of Virginia, the finest section in the United States for growing this fine, early and of its greatest perfection, far superior to all other varieties in earliness, productivity and quality. Of a height and size, the new round, and shorter than the ordinary varieties. It has produced fine edible tubers in nine weeks from planting slips. It is better adapted for cultivation in the Northern States than any other variety, either for early or late market sales. Does well on any ordinary soil, and is the best of keepers, while the quality is much superior to any other. Price per pack, $1.00; bus., $1.75; lb., $6.00. PLANT BED CLOTH

As Substitutes for Glass Sash on Hot Beds and Cold Frames

This will be found an excellent substitute for glass (at one-tenth the cost) in protecting all kinds of seeds and plants on which glass sashes are used in early spring. It is safer in fact than glass, as it protects at night, while the temperature is about 10 degrees too high during the day—as in the case with glass sashes unless great care is given in ventilating—and being light and portable, it can be sent into sections where it would be difficult to get glass. The patent treatment given the cloth fills the threads and fibres and preserves them from decay, and also renders it tougher, heavier and stronger, and prevents it from shrinking after getting wet, and, to some extent, sheds rain. We furnish this cloth in one-yard widths, and in any number of yards desired, as follows: Light Grade, mostly used in the South for tobacco beds and in the North for shading green-houses. Per yard, 4½ cents; by the piece of 68 yards, 35 cents per yard. Medium Grade, the best for general purposes, per yard, 8 cents; by the piece of 50 yards, 75 cents per yard; Heavy Grade, water-proof and advised for Sash and of Pennsylvania; per yard, 10 cents; by the piece of 40 yards, 8 cents per yard.

EXTRA QUALITY FLOWER SEEDS

QUALITY—PRICES. To not confound our high quality Flower Seeds with the usual imported grades sent out by other houses, which are grown cheap, sold cheap, and are in every way expensive to the buyer, our seeds are cultivated with a view of obtaining the highest possible mark of perfection, and to supply a class of people who want nothing but the very best. We have made the price as low as possible consistent with the high quality of all the seeds herein offered.

We have gone to much trouble and expense to improve the leading specialties, such as

**ASTERS, CINERARIAS, MIGNONETTE, PANSY, PHLOX, PETUNIA, PRIMULAS, STOCKS, VERBENAS, AND ZINNIAS.**

Purchasers will find our superb mixtures of the above to be of unexceptional merit, which cannot be obtained elsewhere.

A LIBERAL QUANTITY of seed will be found in all our packets, much more in fact than sent out by other houses.

A TRIAL ORDER will convince any one of the high quality and superiority of our varieties. Florists especially will derive great benefit from buying their flower seeds from us.
